

BUILDGREEN OTTAWA

Sustainable Home Solutions

Realize the maximum potential of your project

Our expertise can ensure you achieve the best value and balance between the numerous variables and goals that come with any project, large or small.

From start to finish, we help make your vision a reality, from house to home.

- Before your initial purchase, decision to renovate or construct, we collectively provide information, evaluations, options and recommendations upon which you can make decisions with confidence.
- From there, we develop the options into concrete designs and strategies to facilitate a comprehensive solution.
- Throughout your project we work to implement the solution with all stakeholders.

We are specialists in our fields with a focus on sustainable solutions to reduce your footprint on the environment and create healthier buildings. Our expertise includes:

Realty – seeking opportunities in healthy communities, identifying environmental concerns, benefits and potential for achieving a sustainable balance in line with your goals and means.

Mortgage & Financing – identifying practicable funding strategies, considering potential rebates, return on investment, and finding the best means to finance your project.

Home Inspections – with a focus on indoor air quality and energy; identifying potential concerns and providing information to maximize your potential energy savings and improvements.

Solar Energy – specializing in assessing and designing to the greatest potential of a property to capitalize on high performance solar water and space heating systems; providing both design and installation services.

Architecture – evaluation, research, design, detailing and coordination of sustainable design and construction practices, incorporating the best combination of systems and materials to achieve integrated solutions.
